Scientific and professional policy design does not necessarily escape the pitfalls of degenerative politics. Scientific and professional expertise often relies on a particular type of knowledge that is limited to utility and rationality considerations. This approach to policy typically does not consider values and cultural factors that cannot be measured empirically. _____

Let's think about flipping a coin. If you get ten heads in a row, what is the likelihood that the next flip will be heads? Don't be fooled — it's 50 percent, the same as it is on any single coin flip. Most people think the chances of getting heads will actually be lower than 50 percent — **the opposite of momentum**. They

know they should see roughly the same number of heads as tails (50-50), so they feel that if they have seen ten heads in a row, they are due for a tails. A tails has to emerge. But it doesn't. There is no law of averages. If the process is random, there is no predictability. This is also what drives the **"gambler's fallacy."**

Gamblers on losing streaks erroneously believe they are due for a win and keep gambling.

9. **the opposite of momentum**이 의미하는 바가 무엇인지 구체적으로 한글로 서술 할 것.

10. **"gambler's fallacy."**가 가리키는 내용이 무엇인지 한글로 서술할 것.
